Review Report

To: The Boards of Directors of Housing & Development Bank "Egyptian Joint Stock Company"

Introduction

We have performed a limited review of the accompanying separate financial statements of **Housing and Development Bank "Egyptian Joint Stock Company"** which comprise the separate statement of financial position as of 31 March 2025 and the related separate statements of income, comprehensive income, cash flows and changes in equity for the three months then ended, and a summary of significant accounting policies and other explanatory notes. Management is responsible for the preparation and fair presentation of these interim separate financial statements in accordance with the rules of preparation and presentation of the banks' financial statements and the basis of recognition and measurement issued by the Central Bank of Egypt on December 16, 2008 as amended by the regulations issued on February 26, 2019 and in the light of the prevailing Egyptian laws and regulations related to the preparation of these interim separate financial statements. Our responsibility is to express a conclusion on these interim separate financial statements based on our limited review.

Scope of limited review

We conducted our limited review in accordance with the Egyptian Standard on Review Engagements (2410) "Limited Review of Interim Financial Statements Performed by the independent Auditor of the Entity". A limited review of interim separate financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters in the bank, and applying analytical and other limited review procedures. A limited review is substantially less in scope than an audit conducted in accordance with Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these interim separate financial statements.

Conclusion

Based on our limited review, nothing has come to our attention that causes us to believe that the accompanying interim separate financial statements do not present fairly, in all material respects, the separate financial position of the Bank as of 31 March 2025 and of its separate financial performance and its separate cash flows for the three months then ended, in accordance with rules of preparation and presentation of the banks' financial statements and basis of recognition and measurement issued by the Central Bank of Egypt on December 16, 2008 as amended by the regulations issued on February 26, 2019 and in the light of the prevailing Egyptian laws and regulations related to the preparation of these interim separate financial statements.

Housing and Development bank is an Egyptian Joint Stock company established as Investments and Business Bank on 30 June 1979 by virtue, ministerial Decree No.147 for a year 1979 and it handles its activity through the head office in Giza governorate and the bank is listed in the Egyptian Stock Market for Securities.

2. Summary of Significant Accounting Policies

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

A. Basis of Preparation

The financial statements are prepared in accordance with Central bank of Egypt instructions approved by its board of directors on 16 December 2008, with consideration to requirements of IFRS 9 (Financial instruments) in accordance with the instructions issued by central bank of Egypt on 28 January 2018, in addition to the historical cost basis, modified by the revaluation of financial assets and liabilities originally valued with fair value through profits and losses, and financial assets at fair value through other comprehensive income, and all financial derivatives contracts.

These separate financial statements were prepared in accordance with relevant local laws, investment in associates are presented in bank's separate financial statement and valued according to cost less impairment loss method.

These separate financial statements had been prepared in accordance with the instructions of the Central Bank of Egypt (CBE) rules that had been in force until 31 December 2018; that have been changed under central bank of Egypt instructions issued on 26 February 2019, regarding the implementation of IFRS 9 – financial instruments.

Effect of implementation IFRS 9 on Accounting Policies

IFRS 9- Financial Instruments

The Bank applied the instructions of the Central Bank of Egypt (CBE) rules IFRS 9 "Financial Instruments" dated February 26, 2019 starting from 1 January 2019, Requirements of IFRS 9 represents material change than required under Egyptian accounting standard no. 26 "financial instrument- recognition and measurement" especially when related to classification, measurement and disclosure of financial assets and some of financial liabilities, the following summarize the main accounting policies changes resulted from applying the required standards:

Classification of financial assets and liabilities

Financial assets have been classified through three main categories as the following:

- Financial assets at amortized cost.
- Financial assets at fair value through other comprehensive income.
- Financial assets at fair value through profit and loss.

Based of IFRS 9, financial assets have been classified according to how they are managed (the entity's business model) and their contractual cash flow characteristics. Therefore Egyptian accounting standard no. (26) is no longer applied (Held to maturity, Loans and available for sale).

The implicit derivative contracts shall not be separated when derivatives are associated with a financial asset and therefore the implicit derivative contract is fully classified according to the related financial asset.

The change in financial liabilities at fair value through profit or loss is presented as follows:

- The change in the fair value related to the change in the degree of the credit rating is presented in other comprehensive income.
- The remaining amount of the change in fair value under (net income from financial assets at fair value through profit or loss) is presented in the income statement.

Housing And Development Bank

Notes To The Separate Financial Statements

For The Three Months Ended 31 March 2025

Impairment of financial assets

IFRS 9 and Central Bank of Egypt (CBE) instructions replaced the impairment loss model recognized according to EAS 26 with expected credit loss (ECL) model, also, IFRS 9 & CBE instructions requires from the bank to implement the measurement of expected credit loss (except for measured at fair value through profit and loss and fair value through other comprehensive income).

The bank excludes the following from the calculation of expected credit losses:

- Deposits at banks with a maturity date of one month and less than the date of the financial position.
- Current accounts at banks.
- Balances at the Central Bank in local currency.
- Debt instruments issued by the Egyptian government in local currency.

Provision shall be identified based on the expected credit losses relating to probability of default over the next 12 months unless the credit risk has increased substantially since inception.

Segment reporting

An operating segment is a group of assets and operations providing products or services whose risks and benefits are different from those associated with products or services provided by other operating segments. A geographical segment provides products or services within a specific economic environment characterized by risks and benefits different from those related to other geographical segments operating in a different economic environment.

B. Subsidiaries & Associates

B.1. Subsidiaries

Subsidiaries companies are the entities over which the bank owns directly or indirectly the power to govern the financial and operating policies generally accompanying a shareholding of more than one-half of the voting right. The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether the bank has the ability to control the entity.

B.2. Associates

Associates are the entities over which the bank owns directly or indirectly significant influence but not control, generally accompanying a shareholding of between 20% and 50% of the voting rights.

Accounting for subsidiaries and associates in the separate financial statements are recorded by cost method, according to this method, investments are recorded at cost of acquisition including any good- will after deducting any impairment losses in value, and the dividends in the income statement are recorded in the adoption of the distribution of these profits and evidence of the bank's right to collect it.

C. Translation of Foreign Currencies

C.1. Functional and presentation currency

The financial statements are presented in Egyptian pound, which is the bank's functional and presentation currency.

C.2. Functions and balances in foreign currencies

The bank maintains its accounts in Egyptian pound and transactions are recorded in foreign currencies during the financial year on the basis of prevailing exchange ratios at the date of the transaction, monetary assets and liabilities denominated in foreign currencies are retranslated at the end of the financial year on the basis of prevailing exchange ratios at that date. Foreign exchange gains and losses resulting from the settlement and translation of such transactions and balances are recognized in the income statement and reported under the following items:

- Net income from financial assets at fair value through profit and loss/or net income from financial instruments classified at fair value through profit and loss at the date of inception of the assets/liabilities or those classified at the date of inception with its fair value through profits and losses according to their type.
- Shareholders' equity of financial derivatives as a coverage for cash flow/net investment or as a coverage for net investment.
- Other operating income (expenses) for the other items.
- Changes in fair value of financial instruments denominated in foreign currency classified at fair value through other comprehensive income (debt instruments) is analyzed between valuation differences from changes in amortized cost of the instrument, differences resulted from changes in the prevailing exchange rates, differences resulted from changes in the fair value of the instrument, and differences resulted from the impairment of the financial assets. Those changes are recognized in the income statement as income on loans and similar items regarding changes in amortized cost and differences related to changes in the exchange rate are recognized as other operating income(expense),

Changes in fair value are recognized in equity (Other comprehensive income/Financial assets at fair value through other profit and loss).

Evaluation differences resulting from non-monetary items include profit and loss resulting from changes in fair value such as equity instruments held at fair value through profit and loss, while evaluation differences resulting from equity instruments classified as financial assets at fair value through other comprehensive income are recognized as other comprehensive income.

D. Financial Assets

D.1. Recognition

The Bank classifies its financial assets into the following categories: fair value through profit or loss (FVTPL), fair value through other comprehensive income (FVTOCI) and amortized cost. Management determines the classification of its investments at initial recognition.

D.2. Classification

Financial assets Policies applied starting from 1 January 2019:

At the time of initial recognition, the bank determines the classification of financial assets to be classified as amortized cost, fair value through other comprehensive income (FVTOCI) and fair value through profit or loss (FVTPL).

Financial asset classified as amortized cost if the following two conditions are met and was not recognized at inception date by the bank as fair value through profit or loss:

- The financial asset is retained in the business model of financial assets held to collect contractual cash flow.
- The contractual terms of the financial asset at specific dates result in contractual cash flows of the asset represented only in the principal financial instrument amount and the return.

Financial assets classified as fair value through other comprehensive income if the following two conditions are met and was not recognized at inception date by the bank as fair value through profit or loss:

- The financial asset is retained in the business model of financial assets held to collect contractual cash flows and sales.
- The contractual terms of the financial asset at specific dates result in contractual cash flows of the asset represented only in the principal financial instrument amount and the return.
- The debt instrument that was not allocated at the initial recognition at the fair value through profit or loss is measured at the fair value through other comprehensive income if both of the following conditions are met:
 - The financial asset is retained in the business model that aims to collect contractual cash flows and sell the financial asset.
 - The contractual terms of the financial asset on specific dates result in cash flows of the asset and not represented only the principal debt and the return.
- Upon the initial recognition of an equity instrument that not held at fair value through profit and loss, the bank may make an irrevocable choice to present subsequent changes in the fair value through the other comprehensive income statement. This choice shall be made for each investment individually.
- The remaining financial assets are classified as investments at the fair value through profit or loss.
- In addition, upon the initial recognition, the bank may irrevocably allocate a financial asset measured at the fair value through profit or loss, although it meets the criteria of classification as a financial asset at amortized cost or at the fair value through other comprehensive income, if this action substantially reduces the inconsistency that may arise in the accounting measurement.

Housing And Development Bank

Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

Business models Evaluation

1) Following debt and equity instruments are classified and measured according to the following:

Financial Instrument	Methods of Measurement According to the Business Model		
		Fair Value	
	Amortized Cost	Through Comprehensive Income	Through Profit or Loss
Equity Instruments		One-time irrevocable choice at the initial recognition	Normal transaction of equity instruments.
Debt Instruments	Business model of assets held to collect contractual cash flows.	Business model of assets held to collect contractual cash flows and sale.	Business model of assets held at fair value through profit and loss.

2) The bank prepares, documents and approves a business model in accordance with the requirements of the IFRS 9 in a way that reflects the Bank's strategy to manage the financial assets and their cash flows as follows:

Financial Asset	Business Model	Basic Characteristics
Financial assets at amortized cost	Business model of financial assets held to collect contractual cash flows	<ul style="list-style-type: none"> ▪ The business model is aimed to retain the financial assets to collect the contractual cash flows of the investment principal amount and the revenues. ▪ The sale is an exceptional action comparing to the purpose of this model and the terms of the standard represented in the deterioration in the creditworthiness of the financial instrument issuer. ▪ Less sales in terms of frequency and value. ▪ The bank performs a clear and reliable documentation of the rationale of each sale process and its compliance with the requirements of the Standard.
Financial assets at fair value through comprehensive income	Business model of financial assets held for the collection of contractual cash flows and sale.	<ul style="list-style-type: none"> ▪ Both the collection of contractual cash flows and sales are complementary to the objective of the model. ▪ Sales are high (in terms of frequency and value) compared to the business model held for the collection of contractual cash flows.
Financial assets at fair value through profit or loss	Other business models include (trading – managing the financial assets based on fair value - maximizing cash flows through sale)	<ul style="list-style-type: none"> ▪ The business model is not aimed to retain the financial asset for the collection of contractual or this retained for the collection of contractual cash flows and sales. ▪ Collecting contractual cash flows is an exceptional action comparing to the model objective. ▪ Managing the financial assets at the fair value through profit or loss to avoid inconsistency in accounting measurement

Housing And Development Bank

Notes To The Separate Financial Statements

For The Three Months Ended 31 March 2025

- The bank shall evaluate the business model goals on the portfolio's level in which the financial asset is retained, being the way that reflects both the methods of work management and information provided. The information to be taken into consideration while evaluating the business model goals include the following:
 - The approved and documented policies and the objectives of the portfolio in addition to applying such policies in practical reality, specially whether the management strategy focuses only on collecting the contractual cash flows of the asset and retaining a certain return rate to meet the dates of financial assets' maturity with the dates of the liabilities' maturity that are funding such assets; or rather on generating cash flows through selling such assets.
 - The method of evaluating the portfolio's performance and reporting the same to the top management.
 - The risks affecting the business model performance including the nature of the financial assets retained within such model and the method of managing such risks.
 - The method of evaluating the performance of work managers (fair value and/ or returns on the portfolio).
 - Frequency, value and timings of sales' transactions in the previous periods; the reasons of such transactions; as well as the expectations regarding the future sale activities. However, the information of the sales' activities are not taken into consideration in isolation., but rather as a part of a comprehensive evaluation of the method of carrying out the bank's goals regarding managing financial assets and how cash flows are generated.
- The financial assets, which are retained for the purpose of trading or those which are managed and evaluated based on the fair value, are calculated by the fair value through profits and losses because they are not retained for the purpose of collecting contractual cash flows and/ or selling financial assets.
- Evaluating whether the asset's contractual cash flows represent payments that are only limited to the original amount of the instrument and the return.

For the purpose of carrying out this evaluation, the bank defines the original amount of the financial instrument as the fair value of the financial asset at initial recognition. The return is defined as the consideration of the time value of money, the credit risks attached to the original amount during a certain period of time, other basic lending risks and costs (such as the risks of liquidity and administrative costs), and profit margin.

For the bank to determine whether the asset's contractual cash flows are payments that are limited to the asset and return on the financial instrument, the bank puts the contractual terms of the instrument into consideration. This includes evaluating whether the financial instrument includes contractual terms that may change the timing or amount of contractual cash flows, which may lead to non-acceptance of such terms.

For the purpose of carrying out the above evaluation, the Bank needs to take the following into consideration:

 - Potential events that may change the timing or amount of contractual cash flows;
 - Characteristics of the financial leverage (rate of return, time limits, currency...)
 - Terms of prompt payment and extension of time limits;
 - The terms that may limit bank's ability to claim cash flows from certain assets;
 - The characteristics that may amend the consideration of the time value of money (re-estimating the return rate on a periodical basis).
- The bank does not reclassify groups of financial assets unless the business model is changed, which rarely happens, or does not happen except infrequently or when the credit capacity of one of the debt instruments declines at amortized cost.

E. Offsetting between Financial Instruments

Financial assets and liabilities are offset when the bank has a legally enforceable right to offset the recognized amounts and it tends to settle this amount on a net basis, or realize the asset and settle the liability simultaneously.

Repos and reverse repos agreements related to treasury bills are netted on the balance sheet and disclosed under "treasury bills and other governmental notes" caption of the balance sheet.

F. Financial Derivatives Instruments and hedging accounting

- Derivatives are initially recognized at fair value on the date on which a derivative contract is entered into and are subsequently re-measured at their fair value. Fair values are obtained from quoted market prices in active markets, including recent market transactions, and valuation techniques, including discounted cash flow models and options pricing models, as appropriate. All derivatives are carried as assets when fair value is positive and as liabilities when fair value is negative.
- Embedded derivatives are not isolated if they were included in a financial instrument that falls under the financial assets definition as per IFRS 9 "Financial Instruments.

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

- Recognizing the profits and losses resulted from the fair value depends on whether the derivative is a covering instrument provision and according to the nature of the covered item, the bank classifies some of the derivatives as one of the following:
 - Risk Hedging of the fair value of recognized assets and liabilities or confirmed commitments (fair value hedging).
 - Risk hedging of future highly expected cash flows related to a recognizes asset or liability or related to an expected transaction (cash flows hedging).
 - Hedging accounting is used for provision derivative for that purpose if the needed conditions are available.
 - At the initiation of the transaction the bank documents the relations between the covered items and hedging instruments, also the objectives of risk management and the strategy of having different hedging transactions. At the beginning of hedging and consciously, the bank documents the estimation of whether the derivative used in hedging transactions are effective in facing the changes in the fair value or cash flows of the covered items.

F.1. Fair value hedging

The changes in the fair value of qualified derivatives provisions for hedging of the fair value are recognized in the income statement, this with any change in the fair value related to the risk of the covered asset or liability.

The effective changes in the fair value of return transfers contracts and the related hedged items are added to the net return and effective changes in the fair value of the future currency contracts are added to net income from financial assets at fair value through profit and loss.

Inefficiency in all of the contracts and the related hedged items mentioned in the previous paragraph are added to the net income from financial assets at fair value through profit and loss.

If the hedging is no longer following the hedging accounting procedures, the modification added to the book value of the hedged items recorded by the amortized cost method, this is through charging it against the profits and losses along the year till its maturity. Amendments in hedged equity instrument's book value remain within the shareholders' equity till it has been excluded.

F.2. Cash flows hedging

The effective part in the changes in the fair value of the qualified derivative provision to hedge the cash flows is recognized as shareholders' equity, while the profit and losses related to the ineffective part are recognized immediately as (net income from financial assets at fair value through profit and loss) in the income statement.

The amounts accumulated in the shareholders' equity are transferred to the income statement in the same period that the hedged item has an effect on profits and losses, profits and losses related to the effective part of the currency transfers and options are added to the net financial assets at fair value through profit and loss item.

When the hedging instrument is being due or sold, or when the hedging is no longer following the hedging accounting procedures, the profits and losses accumulated in the shareholders' equity in that time remain within the shareholders' equity item and it is recognized in the income statement when the expected transaction is finally recognized. But if the expected transaction is no longer expected to occur then the profits and losses accumulated in the shareholders' equity are immediately transferred to the income statement.

F.3. Unqualified derivative of hedging accounting

Changes in the fair value of the unqualified derivatives of hedging accounting are being recognized in the (net income from financial assets at fair value through profit and loss) item. In the income statement, the profits and losses resulted from the changes in the fair value is recognized as (net income of classified financial instruments valued by the fair value of profits and losses), this is through the profits and losses resulted from the changed in the fair value of derivatives managed in relation to the classified assets and liabilities at fair value through profits and losses.

G. Recognizing first day's deferred profits and losses:

Regarding the tools that evaluate the fair value, the transaction price is considered to be the best instrument to evaluate the fair value on the transaction date (fair value of delivered or received return) unless the fair value of the instrument on that date is indicated depending on the transaction's price in published market or using evaluation modules. When the bank has a long term transaction, its fair value is specified using evaluation modules that their inputs may not all be from the published market ratios or prices, those financial instruments are recognized according to transaction price which is the best indication of the fair value.

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

Although the value calculated from evaluation modules may be different, and the difference between the transaction price and the amount resulted from the module is not immediately recognized as first day's profits and losses and it is listed as other assets in the case of loss, and as other liabilities in the case of profit. The timing of recognizing the deferred profit and loss is specified separately for each case through its amortization on the transaction or when it is possible to identify the instrument's fair value using published market's inputs or by approving it when adjusting the transactions, the instruments is measured by the fair value, the subsequent changes in the fair value are immediately recognized in the income statement.

H. Interest Income and Expense

Interest income and expense for all interest-bearing financial instruments, except for those classified as financial assets designated at fair value through profit or loss, are recognized within 'interest income' and 'interest expense' in the income statement using the effective interest method. The effective interest method is a method of calculating the amortized cost of a financial asset or a financial liability and of allocating the interest income or interest expense over the relevant year. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter year to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, transaction costs and all other premiums or discounts. Interest income on loans is recognized on accrual basis except for the interest income on non-performing loans, which ceases to be recognized as revenue when the recovery of interest or principle is in doubt and are rather recorded off balance sheet as follows:

- When it is collected and this is after redeeming all dues of consumer loans and personnel mortgages also small loans for economic activities.
- For corporate loans, interest income is recognized on a cash-basis after the bank collects 25 % of the rescheduled installments and when these installments continue to be paid for at least one year. If a loan continues to be performing thereafter, interest accrued on the principal then outstanding starts to be recognized in revenues. Interest that is written off prior to the date when the loan becomes performing is not recognized in profit or loss except when the total balance of loan, prior to that date, is paid in full.

I. Fees and Commissions

Fees charged for servicing a loan or facility, are recognized as revenue as the service is provided. Fees and commissions on non-performing or impaired loans or receivables cease to be recognized as income and are rather recorded off balance sheet. These are recognized as revenue - on the cash basis – only when interest income on those fees and commissions that are an integral part of the effective interest rate of a financial asset are treated as adjustment to the effective interest rate of that financial asset.

Commitment fees received by the bank to originate a loan are deferred if it is probable that the bank will enter into a specific lending arrangement and are regarded as a compensation for an ongoing involvement with the acquisition of the financial instrument and recognized as an adjustment to the effective interest rate. If the commitment expires without the bank making the loan, the fees are recognized as revenue on expiry.

Fees related to debt instruments which are measured at fair value are recognized under revenue at initial recognition. The fees for promotion of joint loans are recognized within revenues upon completing the promotion process without retaining any part of the loan by the bank, or if the bank maintains a part thereof with the actual interest rate available to other participants.

Fees and commissions that are earned on negotiating or participating in the negotiation of a transaction in favor of another entity, such as arrangements for the allotment of shares or another financial instrument or acquisition or sale of an enterprise on behalf of a client, are recognized as revenue when the transaction has been completed. Administrative consultations and other service fees are usually recognized as revenue on a straight-line basis over the year in which the service is rendered. Fees from financial planning management and custodian services provided to clients over long year are usually recognized as revenue on a straight-line basis over the year in which these services are rendered.

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

J. Dividends

Dividends are recognized in the income statement when the bank's right to receive payment is established.

K. Purchase & Resale Agreements, and Resale & Purchase Agreements

Financial instruments sold under repurchase agreements, are not derecognized from the books. These are shown in the assets side as an addition to the "treasury bills and other governmental notes" line item in the balance sheet. On the other hand, the bank's obligation arising from financial instruments acquired under resale agreements, is shown as a deduction from the "treasury bills and other governmental notes" line item in the balance sheet. Differences between the selling and repurchase price or between the purchase and resale price is recognized as interest expense or income throughout the year of agreements using the effective interest rate method.

L. Impairment of Financial Assets

The bank assembles debt instruments in groups with similar credit risks based on: the type of the banking product as per the retail product, the clients as per the corporate loans, and the recognized credit agency's classifications as per the balances at banks and sovereign debt.

The bank classifies debt instruments into three phases based on the quantitatively and qualitative criteria provided in the (Central Bank of Egypt) CBE's instructions issued on Feb. 26, 2019.

The bank estimates, on the date of financial statements, the provision of the financial instrument's impairment losses for at a value that is equal to the expected credit losses (ECLs) for the lifetime of the financial instrument, except for the debt instruments with low credit risks or otherwise debt instruments whose credit risks did not significantly increase, at the financial position date, since the initial recognition.

The bank considers ECLs to be a potential weighted estimation of ECLs, which are estimated as follows:

ECLs are estimated in the first phase by calculating the current value of the total cash deficit calculated based on the historic probability of default ratios as amended by the expectations of macro-economic scenarios' average that would be the ratios of economic growth, inflation and unemployment for twelve months as per the debt instruments in the first phase or the lifetime of the asset as per the second phase.

As per the credit-impaired debt instruments (third phase), ECLs are calculated based on the difference between the asset's total book balance and the current value of the future expected cash flows.

Commitments related to loans and financial guarantees are considered as among the default value when calculated.

ECLs are calculated for the contracts of financial guarantees based on the difference between the payments expected to be paid to the guarantee holder less any other amounts that the Bank expects to redeem.

The bank shall not move the financial asset from the second phase to the first phase unless all the quantitative and qualitative elements of the first phase are met.

L.1. Financial assets at fair value through the other comprehensive income

Financial assets are measured at fair value through the other comprehensive income, whether they were listed on the Stock Exchange with inactive transactions or not listed, by determining the fair value through one of the accepted technical methods for determining the fair value. However, in case of not being able to determine the fair value of such stocks through a reliable method, they should be measured at replacement cost.

At the date of each financial position, the value of the debt instruments' ECLs are estimated by the bank and recognized in the statement of profits and losses, whereas the rest of differences like the change in the fair value are recognized in the other comprehensive income. In case the value rises, it should be expressed in the statement of profits and losses to the extent of what was previously charged during previous financial periods, provided that any increase should be recognized in value in the other comprehensive income. As per the equity instruments, all change differences are recognized at fair value in the other comprehensive income till the asset is disposed, and in such case, all those differences are carried to the retained earnings.

M. Evaluation of Housing Projects

The cost of works under constructions includes the cost of allocated lands for housing projects, the cost of the constructions therein, the borrowing costs that are capitalized during the borrowing period until related work is finished and all related expenses as works under constructions are considered one of the qualified assets to be charged with the borrowing costs which should be no more capitalized for the projects that its core activities needed to make it ready for its identified purposes or for selling it to other.

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

- Finished housing units are evaluated at lower of the cost or fair value; the fair value is evaluated in the light of detailed studies. In case the fair value is less than the cost, the difference is charged to reduce “profits of housing projects” item in the income statement. In case of an increase in the fair value, such increase shall be credited to the income statement to the extent previously charged to the income statement.
- The cost and selling price of housing units in some distinguished projects are calculated according to the privileges in location and area for each unit with no effect on the project’s total cost.

Investments property

Investments property is represented in land & Buildings owned by the bank for gain rental revenues or capital appreciation. Therefore it doesn’t include real-estate assets used in the bank’s operations or which was received in settlement of the bank’s liability. Investment is accounted by the same method applied for fixed assets in which investments property are recorded at historical cost and depreciated using straight line method using appropriate depreciation rate and recognizing impairment loss if needed.

N. Intangible Assets

N.1. Computer programs

Expenses related to improvement & maintenance of computer programs are recognized as expenses in income statement when incurred. Recognized as an intangible asset expenses related directly with definite programs and under the bank control & expected to generate economic benefits which exceed its cost for more than one year. Direct expenses includes labor cost in the program improvement team in addition to appropriate average of related general expenses and it is recognized as an improvement cost in the expenses that leads to an increased expansion or performance of the computer program more than its original standards, it is added to the program cost.

Computer programs’ cost which are recognized as an asset are amortized over its life time of not more than 4 years.

N.2. Other intangible assets

Represented in the intangible assets other than goodwill and computer programs for example (trademarks, license, and rental contracts benefits).

Other intangible assets are recorded by acquisition cost and is amortized by straight line method or the economic benefits expected, along its estimated useful life. Considering assets with no definite useful life, they are not amortized but its impairment loss is yearly examined and recorded (if found) in the income statement.

O. Fixed Assets

Land and buildings comprise mainly branches and offices. All fixed assets are carried at historical cost net of accumulated depreciation and impairment losses. Historical cost includes expenditures that are directly attributable to the acquisition of the items.

Subsequent costs are included in the asset’s carrying amount or recognized separately, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Bank and the cost of the item can be measured reliably. All other repairs and maintenance expenses are recognized in profit or loss within” other operating expenses” during the financial year in which they are incurred.

Depreciation is charged so as to write off the cost of assets, other than land which is not depreciated, over their estimated useful lives, using the straight-line method to the extent of their estimated residual values based on the following annual rates:

<u>Asset</u>	<u>Annual Depreciation Rate</u>
Buildings & constructions	5%
Machinery and equipment	25%
Furniture	10%
Transportation vehicles	25%

- Re-establishing expenses related to the rented branches are amortized through the estimated production life or the year of the rent contract whichever less.
- Facilities and instalments are depreciated over 3 years.
- The assets’ residual values and useful lives are reviewed, and adjusted if appropriate, at each balance sheet date. Assets that are subject to depreciation are reviewed for impairment whenever events or changes in circumstances

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

indicate that the carrying amount may not be recoverable. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount. The recoverable amount is the higher of the asset's fair value less costs to sell and value in use. The recoverable amount of an asset is the higher of the asset's net realizable value or value in use. Gains and losses on disposals are determined by comparing proceeds with relevant carrying amount. These are included in profit or loss in other operating income (expenses) in the income statement.

P. Non-Financial Asset Impairment

Assets without definite useful life are not amortized & they are being tested annually for impairment. Assets are tested for impairment whenever events or circumstances indicated that the book value may not be recoverable.

Then the impairment loss is recognized & and the carrying amount of an asset is reduced to the extent that such carrying amount exceeds recoverable amount. The recoverable amount represents the higher of the asset's net selling value or value in use. In order to estimate the impairment, asset is joined to smallest possible cash generating unit.

Non-financial assets with impairment are being reviewed to assess whether or not, all or part of such impairment loss should be reversed through profit and loss.

Q. Rental

Payments are recorded in operating rent account after deducting any discounts received from the lesser in the expenses in the income statement according to straight line method within the contract year.

R. Cash and Cash Equivalents

For the purposes of the cash flow statement, cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition; they include cash and balances due from central bank of Egypt-other than those within the mandatory reserve, current accounts with banks and financial assets other than fair value through profit and loss.

S. Provisions

Provisions for restructuring costs and legal claims are recognized when the Bank has a present legal or constructive obligation as a result of past events, it is more likely than not that an outflow of resources will be required to settle the obligation and the amount has been reliably estimated.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole.

A provision is recognized even if the likelihood of an outflow with respect to any one item included in the same class of obligations is remote. When a provision is wholly or partially no longer required, it shall be reversed through profit and loss under other operating income (expense). An appropriate interest rate is used to measure the present value of liabilities' payments that are determined to be settled after one year from balance sheet date. This interest rate is not affected by the taxes' ratios which reflect the cash time value and if it's due in less than a year estimated value of the liability is calculated and if it has an important effect, it's recognized by the present value.

T. Financial collateral contracts

Financial collateral contract is the contract issued by the bank to collateral loans or debit current accounts presented to its customers from other parties and it is required from the bank to pay certain payments to compensate the beneficiaries of carried loss because debit payment in the due date according to the debt instrument's conditions. These financial collaterals are presented to banks, financial institutions and other parties on behalf of the bank's customers.

Initial recognition in the financial statements is recorded by the fair value at the date of granting the collateral which may reflect the collateral fees. Later on, the bank's liability is measured by the virtue of the collateral on the basis of the initial recognition amount less the amortization to recognize the collateral fees in the income statement by the straight line method over the collateral lifetime, or the best estimation of the needed payments to adjust any financial liability resulted from the financial collaterals on the balance sheet date which is higher. These estimations are specified according to the experience in similar transactions and historical losses and also by the management's judgment.

Any increase in the liabilities resulted from financial collaterals, is recognized in the income statement as other operating revenues (expenses).

U. Employees Benefits

U.1. Pension Liabilities

The bank is committed to pay the contributions to the Social Insurance Public Authority, with no other liabilities after paying these contributions. Those contributions are recorded yearly in the income statement in its maturity year and are listed as labor benefits.

The bank has insurance fund for the employees of the bank, which was founded in 1987 Working according to law no. 54 for year 1975 and its executive regulations, in the purpose of granting compensation and insurance benefits for the members, this pension fund and its amendments are implemented on all of the employees of the bank's head office and its branches.

The bank is committed to pay the annual and monthly subscription to the fund according to the funds regulation and its amendments. No other liabilities on the bank after the payment of the subscription. Those subscriptions are recognized as administrative expenses when they come due. The prepaid subscriptions are recognized as assets to the limit that the deposit leads to reduce the future payments or to a refund.

U.2. Retirement Liabilities

The bank has applies a defined medical system for its employees and the retired ones. According to the above mentioned system, the bank's liabilities are represented in the difference between both the present value of liabilities in the balance sheet date and the fair value of its assets including settlements resulted from actuarial profit/loss and also the cost of previous service. Those liabilities are determined annually by independent actuarial expert using the "estimated added unit approach" and are determined through estimated future out cash flow applying interest ratios on bonds with maturities similar to that of the liabilities in "other liabilities" item.

Actuarial profit/loss resulted from settlements together with amendments in the medical system are charged to the income statement

The cost of the previously recognized service is charged directly to the income statement as (general & administrative expense) unless changes that have been made on the policies state that worker should stay for a specified year, in this case the cost of the service is amortized using straight-line method.

U.3. Share based payments

The bank operates an equity-settled, share-based compensation plan. The fair value of the employees services received in exchange for the grant of the options is recognized as an expense.

The proceeds received net of any directly attributable transaction costs are credited to share capital (nominal value) and share premium when the options are exercised.

V. Income Taxes

Income tax expense on the year's profit or loss includes the sum of the tax currently payable and deferred tax and is recognized in the income statement, except when they relate to items that are recognized directly in equity, in which case the tax is also recognized in equity.

Income tax is recognized based on net taxable profit using the tax ratios applicable at the date of the budget in addition to tax adjustments for previous years.

Deferred taxes is recognized on temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit.

Deferred tax assets and liabilities are measured at the tax ratios that are expected to apply in the year in which the liability is settled or the asset realized, based on tax ratios (and tax laws) that have been enacted or substantively enacted by the end of the reporting year. Deferred tax assets are generally recognized for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilized. The carrying amount of deferred tax assets is reviewed at the end of each reporting year and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered. However, when it is expected that the tax benefit will increase, the carrying amount of deferred tax assets shall increase to the extent of previous reduction.

W. Borrowing

Loans obtained by the bank are initially recognized at fair value net of transaction costs incurred in connection with obtaining the loan. Borrowings are subsequently measured at amortized cost, with the difference between net proceeds and the value to be paid over the borrowing year, recognized in profit or loss using the effective interest rate method.

X. Capital

X.1. Cost of capital

The issuance expenses that are related directly with issuing new shares or shares of acquiring entity or issuance options, are presented as a deduction from shareholders' equity and the net revenues after tax.

X.2. Dividends

Dividends are recognized when the general assembly of shareholders approves them. Dividends include the employees' profit share and the board of directors' remuneration as prescribed by the bank's articles of association and the corporate law.

Y. Trust Activities

Trust activities are the assets' opposition and managing for individuals and funds. Its values and profits are not recognized in the bank's financial statements because they are not owned by the bank.

Z. Comparative Figures

Comparative figures are reclassified, where necessary, to conform with changes in the current year's presentation.

3. Management of Financial Risks

The bank, as a result of conducting its activities, is exposed to various financial risks. Since financial activities are based on the concept of accepting risks and analysing and managing individual risks or group of risks together, the bank aims at achieving a well-balanced risks and relevant rewards, as appropriate and to reduce the probable adverse effects on the bank's financial performance. The most important types of risks are credit risk, market risk, liquidity risk and other operating risks. The market risk comprises foreign currency risk, interest rate risk and other pricing risks.

The risk management policies have been laid down to determine and analyse the risks, set limits to the risks and control them through reliable methods and up-to-date systems. The bank regularly reviews the risk management policies and systems and amendments thereto, so that they reflect the changes in markets, products and services and the best up-to-date applications. Risks are managed in accordance with preapproved policies by the board of directors. The risk management department identifies, evaluates and covers financial risks, in close collaboration with the bank's various operating units. The board of directors provides written rules which cover certain risk areas, such as credit risk, foreign exchange risk, interest rate risk and the use of derivative and non-derivative financial instruments. Moreover, the risk department is responsible for the year review of risk management and the control environment independently.

A. Credit Risk

The bank is exposed to the credit risk which is the risk resulting from failure of the client to meet its contractual obligations towards the Bank. The credit risk is considered to be the most significant risk for the bank, therefore requiring careful management. The credit risk manifests itself in the lending activities and debt instruments in bank's assets as well as off balance sheet financial instruments, such as loans commitments. The credit risk management and control are centralized in a credit risk management team in Bank Risk management department and reported to the Board of Directors and head of each business unit regularly.

Notes To The Separate Financial Statements

For The Three Months Ended 31 March 2025

A.1. Measuring the Credit Risk

Loans and facilities to banks and clients

In measuring credit risk of loan and advances to customers and to banks at a counterparty level, the Bank's rating system is based on three key pillars:

- The 'probability of default' by the client or counterparty on its contractual obligations.
- Current exposures to the counterparty and its likely future development, from which the bank derive the (exposure at default).

These credit risk measurements, which reflect expected loss .The operational measurements can be contrasted with impairment allowances required under EAS and in accordance with the Central Bank of Egypt's instructions approved by the board of directors on 16 December 2008, which are based on losses that have been incurred at the balance sheet data (the 'incurred loss model') rather than expected losses.

The bank assesses the probability of default of individual counterparties using internal rating tools tailored to the various categories of counterparty. They have been developed internally and combine statistical analysis with credit officer judgment to reach the relevant credit rating basis. Clients of the Bank are segmented into four rating classes. The bank's rating scale, which is shown below, reflects the range of default probabilities defined for each rating class. This means that, in principle, exposures migrate between classes as the assessment of their probability of default changes. The rating tools are kept under review and upgraded as necessary. The Bank regularly validates the performance of the rating and their predictive power with regard to default events.

Bank's internal ratings scale

<u>Bank's Rating</u>	<u>Description of the grade</u>
1	Good debts
2	Normal watch-list
3	Special watch-list
4	Non-performing loans

The position exposed to default depends on the amounts that the Bank expects to be outstanding when delay occurs. For instance, for the loans, the position would be the nominal value; for commitments, the Bank includes all the amounts already withdrawn in addition to the other amounts that are expected to be withdrawn till the date of delay, if any. Presumptive loss represents the Bank's expectations of the amount of loss when the debt is claimed in case of delay. This is expressed by the loss percentage in the debt, which certainly differs according to the type of debtor, the priority of claim, and the availability of guarantees or other credit coverage means.

Debt Instruments

As per debt instruments, the bank uses external classifications or any equivalent in credit risks' management. However, if such evaluations are not available, similar methods are used to the ones applied to credit clients. Such investments in securities are considered a means to obtain a better credit quality and at the same time it provides an available source for meeting the financing requirements.

A.2. Risk limit control and mitigation policies

The bank manages, limits and controls concentrations of credit risk wherever they are identified – in particular, to individual counterparties and banks, and to industries and countries.

The Bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by individual, counterparties, product, and industry sector and by country are approved quarterly by the Board of Directors. The exposure to any one borrower including banks and brokers is further restricted by sub-limits covering on- and off-balance sheet exposures, and daily delivery risk limits in relation to trading items such as forward foreign exchange contracts. Actual exposures against limits are monitored quarterly.

Exposure to credit risk is also managed through regular analysis of the ability of borrowers and potential borrowers to meet interest and capital repayment obligations and by changing these lending limits where appropriate.

Some other specific control and mitigation measures are outlined below:

Collaterals

The bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is the taking of security for funds advances, which is common practice. The bank implements guidelines on the acceptability of specific classes of collateral or credit risk mitigation. The principal collateral types for loans and advances are:

- Mortgages over residential properties.
- Mortgage business assets such as premises, inventory and accounts receivable.
- Mortgage financial instruments such as debt securities and equities.
- Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured.

In addition, in order to minimize the credit loss the bank will seek additional collateral from the counterparty as soon as impairment indicators are noticed for the relevant individual loans and advances.

- Collateral held as security for financial assets other than loans and advances is determined by the nature of the instrument. Debt securities, treasury and other governmental securities are generally unsecured, with the exception of asset-backed securities and similar instruments, which are secured by portfolios of financial instruments.

Derivatives

The bank maintains strict control limits on net open derivative positions (i.e., the difference between purchase and sale contracts), by both amount and term. At any one time, the amount subject to credit risk is limited to the current fair value of instruments that are favorable to the bank (i.e., assets where their fair value is positive), which in relation to derivatives is only a small fraction of the contract, or negotiable values used to express the volume of instruments outstanding. This credit risk exposure is managed as part of the overall lending limits with customers, together with potential exposures from market movements. Collateral or other security is not usually obtained for credit risk exposures on these instruments, except where the bank requires margin deposits from counterparties.

Settlement risk arises in any situation where a payment in cash, securities or equities is made in the expectation of a corresponding receipt in cash, securities or equities. Daily settlement limits are established for each counterparty to cover the aggregate of all settlement risk arising from the Bank market transactions on any single day.

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

Commitments Related to Credit

The primary purpose of these instruments is to ensure that funds are available to a customer as required. Collaterals and standby letter of credit carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the Bank on behalf of a customer authorizing a third party to draw drafts on the Bank up to a stipulated amount under specific terms and conditions – are collateralized by the underlying shipments of goods to which they relate and therefore carry less risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, collaterals or letters of credit. With respect to credit risk on commitments to extend credit, the Bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards. The Bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than shorter-term commitments.

A.3. Impairment and Provisions Policies

Policies The internal rating systems previously described focus more on credit-quality mapping from the inception of the lending and investment activities. In contrast, impairment provisions are recognized for financial reporting purposes only for losses that have been incurred at the balance sheet date based on objective evidence of impairment due to the different methodologies applied, the amount of incurred credit losses provided for in the financial statements are usually lower than the amount determined from the expected loss model that is used for internal operational management and Central Bank of Egypt's regulation purposes.

The impairment provision shown in the balance sheet at the period is derived from each of the three internal rating grades. However, the majority of the impairment provision comes from the bottom two grades.

The table below shows the percentage of the bank's in balance sheet items relating to loans and advances and the associated impairment provision for each of the bank's internal rating categories

<u>31/03/2025</u>		
<u>Bank's Rating</u>	Loans and facilities %	Impairment losses provision %
Stage 1	91%	22%
Stage 2	3%	16%
Stage 3	6%	62%
	<hr/>	<hr/>
	100%	100%

Loans and facilities includes loans used limit and percentage of loans agreements, according to the volume of expected used limit in addition to financial collateral contracts.

The bank's policy requires the review of all financial assets that are above materiality thresholds at least annually or more regularly when individual circumstances require. Impairment allowances on individually assessed accounts are determined by an evaluation of the incurred loss at balance-sheet date on a case-by-case basis, and are applied to all individually significant accounts. The assessment normally encompasses collateral held (including re-confirmation of its enforceability) and the anticipated receipts for that individual account.

Impairment loss provision is formed based on homogenous assets using the historical experience of loan losses, available personal judgment of bank management and statistical methods.

Housing And Development Bank

Notes To The Separate Financial Statements

For The Three Months Ended 31 March 2025

A.4. Bank Risks Measurement General Model

In addition to the four categories of measuring credit worthiness the management makes sub-groups more detailed according to the Central Bank of Egypt's rules. Assets facing credit risk are classified to detailed conditions relying greatly on customer's information, activities, financial position and his regular payments to his debts.

The bank calculates the provisions needed for impairment of assets exposed to credit risk including commitments related to the credit based on special percentages determined by Central Bank of Egypt. In the case of increase of impairment loss provision needed according to credit worthiness as per Central Bank of Egypt over the impairment loss for the purpose of preparing the financial statement according to the Central Bank of Egypt approved by the Board of Directors as on February 26, 2019, regarding the implementation of IFRS 9, the general banking risk reserve is included in owners' equity deducted from the retained earning with this increase, this reserve is modified on a regular basis with the increase and decrease, which equals the increase in provisions and this reserve is not distributed.

And this are categories of institutional worthiness according to internal ratings compared with Central Bank of Egypt's ratings and ratios of provisions needed for assets impairment related to credit risk:

<u>Classification of the Central Bank of Egypt</u>	<u>Classification Significance</u>	<u>Required provision rate</u>	<u>Internal classification</u>	<u>Internal classification Significance</u>
1	Low risks	Zero	1	Performing loans
2	Average Risk	1%	1	Performing loans
3	Satisfactory risks	1%	1	Performing loans
4	Reasonable Risk s	2%	1	Performing loans
5	Acceptable Risk	2%	1	Performing loans
6	Marginally Acceptable risk	3%	2	Regular watching
7	Watch list	5%	3	Watch list
8	Substandard	20%	4	Non-performing loans
9	Doubtful	50%	4	Non-performing loans
10	Bad Debt	100%	4	Non-performing loans

Housing And Development Bank

Notes To The Separate Financial Statements

For The Three Months Ended 31 March 2025

B. Market Risk

The bank is exposed to market risks, which is the risk of fluctuation in fair value or future cash flows of a financial instrument due to changes in market prices. Market risks arise from open positions in interest rate, currency and equity products, all of which are exposed to general and specific market movements and changes in the level of volatility of market ratios or prices.

B.1. Market Risk Measurement Techniques:

Value at risk

The bank applies “value at risk” methodology (VAR) to its trading portfolios, to estimate the market risk of its positions held and it’s been monitoring daily.

VAR is a statistically based estimate of the potential loss on the current portfolio resulting from adverse market movements. It expresses the ‘maximum’ amount the bank might lose, by using certain level of confidence (98%). There therefore a specified statistical probability (2%) that actual loss could be greater than the VAR estimate. The VAR model assumes a certain ‘holding period’ (10 days) before closing the opened quarters, and it is assumed that the movement of the market during the retention period will follow the same movement pattern that occurred during the previous ten days.

The bank is assessing the historical movements in the market prices based on volatilities and correlations data for the past two years while collecting the historical data for the past five years and the bank applies these historical changes in rates, prices and indicators directly to the current positions, and this way is known as a simulated historical method and the actual outputs are monitored on regular basis to measure the appropriate assumptions and factors used to measure VAR. The use of this approach does not prevent losses outside of these limits in the event of more significant market movements.

Stress testing

Stress tests provide an indication of the potential size of losses that could arise under extreme market conditions. Therefore, bank designs stress tests according to its activities by using typical analysis to specific scenarios.

Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

B.2. Foreign exchange risk

The Bank takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange ratios on its financial position and cash flows. The Board sets limits on the level of exposure by currency and in aggregate for both overnight and intra-day positions, which are monitored daily. The table below summarizes the bank's exposure to foreign currency exchange rate risk and bank's financial instruments at carrying amounts, categorized by currency.

Housing And Development Bank
Notes To The Separate Financial Statements
For The Three Months Ended 31 March 2025

B.3. Interest rate Risk

Cash flow interest rate risk is the risk that the future cash flows of a financial instrument will fluctuate because of changes in market interest ratios and fair value interest rate risk is the risk that the value of a financial instrument will fluctuate because of changes ratios in market interest rates. Interest margins may increase as a result of such changes but profit may decrease in the event that unexpected movements arise. The board sets limits on the level of mismatch of interest rate reprising that may be undertaken, which is monitored daily by treasury Dept.

The following table summarizes the risk that the bank faces the change in the return value including the book value of financial instruments allocated based on the re-pricing dates or due dates price whichever is sooner:

Housing And Development Bank

Notes To The Separate Financial Statements For The Three Months Ended 31 March 2025

C. Liquidity Risk

Liquidity risk is the risk that the Bank is unable to meet its obligations associated with its financial liabilities when they fall due and to replace funds when they are withdrawn. The consequence may be the failure to meet obligations to repay depositors and fulfill commitments to lend.

Liquidity Risk Management

The bank's liquidity management process and monitored by Risk Management Department, includes:

- Day-to-day funding, managed by monitoring future cash flows to ensure that requirements can be met. This includes replenishment of funds as they mature or is borrowed by customers. The bank maintains an active presence in global money markets to enable this to happen.
- Maintaining a portfolio of highly marketable assets that can easily be liquidated as protection against any unforeseen interruption to cash flow.
- Monitoring balance sheet liquidity ratios against internal requirements and central bank of Egypt.
- Managing the concentration and profile of debt maturities.

Monitoring and reporting take the form of cash flow measurement and projections for the next day, week and month respectively, as these are key years for liquidity management. The starting point for those projections is an analysis of the contractual maturity of the financial liabilities and the expected collection date of the financial assets.

Risk Management Department also monitors unmatched medium-term assets, the level and type of un-drawn lending commitments, the usage of overdraft facilities and the impact of contingent liabilities such as standby letters of credit and guarantees.

Funding approach

Sources of liquidity are regularly reviewed by a separate team in Risk Management (Assets & liabilities), to maintain a wide diversification by currency Geographic regions provider, product and term

The available assets to cover all the liabilities and the loan's obligations include cash, balances with Central bank, dues from banks, treasury bills, other governmental securities and loans and advances to customers and banks, customers' loans that are due within a year are extended partially for the ordinary activity of the bank. In addition, some of debt instruments, treasury bills and governmental securities are mortgaged to guarantee the liabilities, the bank has the ability to cover the net unexpected cash flows through the sale of financial securities and finding other funding resources.

Due from banks

The fair value of floating rate placements and overnight deposits is their carrying amount. The estimated fair value of floating interest-bearing deposits is based on discounted cash flows using prevailing money-market interest ratios for debts with similar credit risk and remaining maturity.

Loans and Facilities to banks

Loans and banking facilities represented in loans not from deposits at banks. The expected fair value of the loans and facilities represents the discounted value of future cash flows expected to be collected. Cash flows are discounted using the current market rate to determine fair value.

Loans and Facilities to customers

Loans and advances are net of provisions for impairment. The estimated fair value of loans and advances represents the discounted amount of estimated future cash flows expected to be received. Expected cash flows are discounted at current market ratios to determine fair value.

Financial Assets

Investment securities include only interest-bearing assets held at amortized cost; financial assets classified at fair value through other comprehensive income are measured at fair value. Fair value for assets held at amortized cost is based on market prices or broker/dealer price quotations. Where this information is not available, fair value is estimated using quoted market prices for securities with similar credit, maturity and yield characteristics.

Due to other banks and customers

The estimated fair value of deposits with no stated maturity, which includes non-interest-bearing deposits, is the amount repayable on demand.

The estimated fair value of fixed interest-bearing deposits and other borrowings not quoted in an active market is based on discounted cash flows using interest ratios for new debts with similar remaining maturity.

D. Capital Management

The Bank's objectives when managing capital, which consists of other items in addition of owner's equity stated in balance sheet are:

- To comply with the legal requirements for capital in Egypt.
 - To safeguard the Bank's ability to continue as ongoing concern so that it can continue to provide returns for Shareholders and stakeholders and other parties that deal with the bank.
 - To maintain a strong capital base to support the development of its business.
- Capital adequacy and the use of regulatory capital are monitored daily by the Bank's management, employing techniques based on the guidelines developed by the Basel Committee as implemented by the Central bank Of Egypt, for supervisory purposes.
- The required information is filed with the Authority on a quarterly basis. Central Bank of Egypt requires the following:
- Holding the minimum level of the issued and paid in capital of EGP 5 billion.
 - Maintaining a ratio of total regulatory capital to the risk weighted asset or above the agreed minimum of 10%.

The bank's branches are working under the regulations of the banking sector in Egypt.

The nominator of capital adequacy standard consists of two tiers:

Tier One:

Tier one, consisting of paid-in capital (after deducting the book value of treasury shares), and retained earnings and reserves resulting from the distribution of profits with the exception of banking risk reserve and deducting there from previously recognized goodwill and any transferred loss.

Tier Two:

Qualifying subordinated loan capital, which consists of the equivalent accumulated to general risk reserve according to the principles of credit issued by the Central Bank of Egypt for not more than 1.25% of total assets and liabilities weighted with risk, loans / deposits support in excess of the schedule of five years (with consumption of 20% of their value in each year of the last five years of the schedule) and 45% of the increase between the fair value and book value for each of the financial assets in Associates and subsidiaries and 45% from Special Reserve.

When calculating the total dominator of capital adequacy, it shall not exceed the capital cushions (Qualifying subordinated loan capital) for share capital and loans not to increase (deposits) support for half of the share capital.

Assets are risk weighted ranging from zero to 100% classified by the relation of the debtor to all each asset to reflect the credit risk associated with it, taking the cash collateral account. These are used for the treatment of off-balance sheet items after adjustments to reflect the nature of contingency and the potential loss of those amounts.

The bank had complied with all the local capital requirements.

Housing And Development Bank

Notes To The Separate Financial Statements

For The Three Months Ended 31 March 2025

4. Critical Accounting Estimates and Judgments

The Bank makes estimates and assumptions that affect the reported amounts of assets and liabilities within the next financial year. Estimates and judgments are continually evaluated and based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances and available info.

A. Impairment losses on loans and facilities

Based on personal basis The Bank reviews its loan portfolios to assess impairment at least on a quarterly basis in determining whether an impairment loss should be recorded in the income statement, the Bank makes judgments as to whether there is any observable data indicating that there is a measurable decrease in the estimated future cash flows from a portfolio of loans before the decrease can be identified with an individual loan in that portfolio .This evidence may include observable data indicating that there has been an adverse change in the payment (Egyptian Pounds) status of borrowers in a Bank, or national or local economic conditions that correlate with defaults on assets in the Bank. Management uses estimates based on historical loss experience for assets with credit risk characteristics and objective evidence of impairment similar to those in the portfolio when scheduling its future cash flows. The methodology and assumptions used for estimating both the amount and timing of future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience.

B. Fair value of derivatives

The fair values of financial instruments that are not quoted in active markets are determined by using valuation techniques. Where valuation techniques (for example, models) are used to determine fair values, they are validated and periodically reviewed.

C. Financial assets classified as amortized cost

The non-derivative financial assets with fixed or determinable payments and fixed maturity are being classified as amortized cost. This classification requires significant judgment. In making this judgment, the Bank evaluates its intention and ability to hold such investments to maturity. If the Bank fails to keep these investments to maturity other than for the specific circumstances- for example selling insignificant amount near to the maturity date.

D. Income taxes

The bank is subject to income tax in a number of tax circles for its branches which requires the use of significant estimates to determine the total income tax provision. There's a number of operations and accounts that are difficult to determine its final tax expense accurately. The bank created provisions for the expected results of the tax inspection that is being conducted and to account for probable additional tax. When there is a difference between the final results of the tax and the pre-recorded amounts, these differences will be adjusted against the income tax and the deferred income tax provision.

5. Segment Analysis

A. Segment Analysis of activities

Segment activity includes operational procedures and the assets that are used in providing banking services and managing the risk related to it and the return relevant to that activity that may differ from any other activities and the segment analysis of operations according to banking operations includes the following:

Corporate, medium & small sized enterprise

This includes current accounts (debit/credit), deposits, loans & facilities and financial derivatives.

Investments

Includes merging of companies, financing companies restructuring & financial tools.

Retail

Includes current, saving & deposit accounts, credit cards, and personal & real estate loans.

Other activities

Includes other banking activities.

Transactions between business segments are on normal commercial terms and conditions and it includes operational assets and liabilities as presented in the Banks's balance sheet.

Revenues and Expenses according to segment activity

The year ended on 31 March 2025					<u>EGP</u>

C. Banking and housing activities

The bank's main activity is banking activity and other activities related to banking, which represented in the receiving deposits from customers and other sources of funds from the banking system and the Central Bank of Egypt. These funds are used in lending activities to other companies, retail banking products of various types and short and long term investments activities through financial markets and other financial assets and provide banking services of all kinds as the bank of the leading banks in banking with full and permanent commitment to the Banking Law No. 194 of 2020 and the instructions of the Central Bank of Egypt about the rules related to the banking system, including the commercial banks operating in the Arab Republic of Egypt, In order to maximize the return on shareholders' equity and to complement the Bank's view of the integration of the banking services, the Bank may in some cases consider investing part of the shareholders' equity and long-term savings instruments in some of the equity instruments in some companies engaged in real estate development activity or entering into some housing projects to serve and integrate banking activities in order to maximize the return on assets and shareholders' equity with emphasis on the Bank's strategy of continuing as a banking institution representing housing activities not only an essential part of the bank but also helps to develop and enhance the bank's presence among the leading banks in providing banking services, the most important of which is to be the main arm of one of its clients, which aims at housing development within the framework of the Country's plan in economic and social development as well as the rest of the bank's corporate clients. The Bank aims to maintain excellent banking relationships with them as part of its banking business.

The distribution of revenues, expenses and profits on both banking and real estate activity as at 31 March 2025 is as follows:
